Features	HSBC ULTRA SHORT TERM BOND FUND	HSBC GILT FUND														
Type	An open ended Debt Scheme	An Open-ended Gilt Scheme														
Investment Objective	Seeks to provide liquidity and reasonable returns by investing primarily in a mix of short term debt and money market instruments.	Aims to generate reasonable returns through investments in Government Securities of various maturities. The AMC's view of interest rate trends and the nature of the plans will be reflected in the maturities of securities in which the Plans are invested.														
Date of Inception	17 October, 2006	5 December, 2003														
Asset Allocation Pattern	Please refer to page 4															
Investment Strategy	The aim of the Investment Manager will be to allocate the assets of the Scheme between various money market and fixed income securities (predominantly short duration instruments) with the objective of providing liquidity and achieving optimal returns with the surplus funds. Since providing liquidity is of paramount importance, the focus will be to ensure liquidity while seeking to maximise the yield. An appropriate mix of money market and debt instruments will be used to achieve this. Liquidity will be maintained through a combination of cash, reverse repo, daily put / call MIBOR papers and liquid CPs / CDs of strong credits. As compared to a liquid fund, the higher portfolio maturity would mean higher allocation to 6-12 months instruments and a mix of structured credits in the 1 year segment as well as moving down the credit curve to improve yield. The fund could run a mark to market component slightly higher than a liquid fund (whose regulatory maximum is 10%) but sharply lower than an STP (in the region of 40-60%).	HGF shall invest in Government Securities which shall provide reasonable returns generally construed to be without any Credit Risk. It may also invest in repos / reverse repos in such securities, as and when permitted by RBI. The Scheme will endeavour to invest mainly in securities issued by Government of India and the State Governments which issue these securities to raise finance to meet their Revenue and Capital expenditure. The Government Securities market is a liquid market in India and provides an avenue for investment where risk is generally lower than that in corporate bonds. The Scheme will provide an opportunity to retail investors to invest in Government Securities.

Features	HSBC FLOATING RATE FUND – LONG TERM PLAN (LT)	HSBC CASH FUND	HSBC FLEXI DEBT FUND
Type	An open ended Income Scheme	An open-ended Liquid Scheme	An open-ended Debt Scheme
Investment Objective	Seeks to generate reasonable return with commensurate risk from a portfolio comprised of floating rate debt instruments and fixed rate debt instruments swapped for floating rate returns. The scheme may also invest in fixed rate money market and debt instruments. There can be no assurance that the Scheme objective can be realised.	Aim is to provide reasonable returns, commensurate with low risk while providing a high level of liquidity, through a portfolio of money market and debt securities. However there can be no assurance that the scheme objective can be realised.	To deliver returns in the form of interest income and capital gains, along with high liquidity, commensurate with the current view on the markets and the interest rate cycle, through active investment in debt and money market instruments.
Date of Inception	16 November, 2004	4 December, 2002	5 October, 2007
Asset Allocation Pattern	Please refer to page 4	Please refer to page 5	Please refer to page 5
Investment Strategy	The Scheme shall invest in floating rate debt and Money Market Instruments, other debt and money market instruments and cash and cash equivalents such as reverse repos. The Scheme would seek to generate reasonable returns. Floating rate instruments are instruments where interest rate is linked to a benchmark (such as MIBOR, 1 year, G-sec etc.). In general, floating rate instruments provide higher returns in the event the benchmark interest rate moves up as repricing of instrument happens at higher rate. However if the benchmark interest rate moves down then returns on the floating rate instrument will be lower.	Since providing liquidity is of paramount importance, the focus will be to ensure liquidity while seeking to maximise the yield. An appropriate mix of money market and debt instruments will be used to achieve this. The Fund may invest a part of the portfolio in various debt securities issued by corporates and / or State and Central Government.	The Scheme can invest across all classes of fixed income instruments. There will be no cap or floor on maturity, duration or instrument type concentrations. The Fund Manager, depending on the interest rates view has the flexibility to allocate the funds in any fixed income instrument and endeavour to provide yields in line with the current market scenario. The Fund aims to optimise returns for the investors by designing a portfolio, which will dynamically track interest rate movements in the short term by reducing duration in a rising rate environment while increasing duration in a falling interest rate environment. The investment strategy would revolve around structuring the portfolio with an aim to capture positive price movements and minimise the impact of adverse price movements.
Risk Profile	Mutual Fund units involve investment risks including the possible loss of principal. Please read the Combined SID carefully for details on risk factors before investment. Please refer to page 14 for the summarized scheme Specific Risk Factors under "Common features for all Schemes"

The Fund shall before the expiry of 1 month from the close of each half year, that is as on 31 March and 30 September, publish its unaudited financial results and complete statement of the Scheme's portfolios, in one English daily newspaper circulating in the whole of India and in a newspaper published in the language of the region where the Head Office of the Fund is situated and update the same on the Fund's website at www.assetmanagement.hsbc.com/in and on AMFI's website at www.amfiindia.com, in the formats as prescribed by SEBI.

Scheme Specific Risk Factors**Risk factors associated with investing in Equity or Equity related Securities**

● Equity instruments by nature are volatile and prone to price fluctuations on a daily basis due to both macro and micro factors. ● Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme(s) to make intended securities' purchases due to settlement problems could cause the Scheme(s) to miss certain investment opportunities. In the view of the Fund Manager, investing in Mid and Small Cap stocks are riskier than investing in Large Cap Stocks. ● To the extent the assets of the scheme are invested in overseas financial assets, there may be risks associated with currency movements, exchange controls, settlements, restrictions on repatriation and transaction procedures in overseas market. ● The Scheme(s) at times may receive large number of redemption requests which may have an adverse impact on the performance of the Scheme(s) and may also affect all the unit holders as the fund manager needs to liquidate securities to meet the redemptions post which the portfolio is likely to be less liquid.

Restructuring / Rescheduling Risk

There could be cases of restructuring / re-scheduling of particular debt / money market instruments held in the portfolio which could result in the maturity of these instruments going beyond the original maturity date of the instrument. In such cases the fund manager may be constrained to sell these instruments in the market at realizable value and pass on the loss / impact to investors under the Scheme.

Risk factors associated with investing in Fixed Income Securities

Subject to the stated investment objective, the Scheme(s) propose to invest in debt and related instruments.

● **Price-Risk or Interest Rate Risk:** As with all debt securities, changes in interest rates may affect the NAV of the Scheme(s) as the prices of securities increase as interest rates decline and decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV. In the case of floating rate instruments, an additional risk could be due to the change in the spreads of floating rate instruments. If the spreads on floating rate papers rise, then there could be a price loss on these instruments. Secondly in the case of fixed rate instruments that have been swapped for floating rates, any adverse movement in the fixed rate yields vis-à-vis swap rates could result in losses. However, floating rate debt instruments which have periodical interest rate reset, carry a lower interest rate risk as compared to fixed rate debt instruments. In a falling interest rate scenario the returns on floating rate debt instruments may not be better than those on fixed rate debt instruments.

● **Liquidity or Marketability Risk:** This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.

- **Credit Risk:** Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e. will be unable to make timely principal and interest payments on the security). Because of this risk, corporate debentures are sold at a yield above those offered on Government Securities, which are sovereign obligations. Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.
- **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme(s) are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- **Duration Risk:** Duration is a risk measure used to measure the bond / security price changes to potential changes in interest rates. Duration of portfolio x the expected changes in rates = the expected value change in the portfolio. Duration is more scientific measure of risk compare to average maturity of the portfolio. The higher the duration of the portfolio, the greater the changes in value (i.e. higher risk) to movement in interest rates. Modified duration is the duration of a bond / security given its current yield to maturity, put / call feature, and an expected level of future interest rates.
- **Benchmark Risk:** The floating rate segment of the domestic debt market is not very developed. Currently, majority of the issuance of floating rate papers is linked to NSE MIBOR. As the floating rate segment develops further, more benchmark rates for floating papers may be available in future. The fewer number of benchmark rates could result in limited diversification of the benchmark risk. Different types of securities in which the scheme(s) would invest as given in the Combined Scheme Information Document carry different levels and types of risk. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern. E.g. corporate bonds carry a higher amount of risk than Government Securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.
- **Prepayment Risk:** The risk associated with the early unscheduled return of principal on a fixed-income security. The early unscheduled return of principal may result in reinvestment risk.
- **Short Selling Risk:** The risk associated with upward movement in market price of security sold short may result in loss. The losses on short position may be unlimited as there is no upper limit on rise in price of a security.

Risks associated with Investing in Derivatives

- The Fund may use derivative instruments like stock index futures, option on stocks, stock indices, interest rate swaps, forward rate agreements or other derivative instruments as permitted under the Regulations and guidelines. As and when the Scheme(s) trade in the derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialised instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Also, the market for derivative instruments is nascent in India and so liquidity risk is also pretty high. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be perused by the fund manager involve uncertainty and decision of fund manager(s) may not always be profitable. No assurance can be given that the fund manager(s) will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Risks associated with Investing in Securitised Debt

Securitised Debt: Securitised debt papers carry credit risk of the Obligor and are dependent on the servicing of the PTC / Contributions etc. However these are offset suitably by appropriate pool selection as well as credit enhancements specified by Rating Agencies. In cases where the underlying facilities are linked to benchmark rates, the securitised debt papers may be adversely impacted by adverse movements in benchmark rates. However this risk is mitigated to an extent by appropriate credit enhancement specified by rating agencies. Securitised debt papers also carry the risks of prepayment by the obligors. In case of prepayments of securities debt papers, it may result in reduced actual duration as compared to the expected duration of the paper at the time of purchase, which may adversely impact the portfolio yield. These papers also carry risk associated with the collection agent who is responsible for collection of receivables and depositing them. The underlying assets in the case of investment in securitised debt could be mortgages or other assets like credit card receivables, automobile/ vehicle / personal / commercial/ corporate loans and any other receivables / loans / debt.

The Risks associated with the underlying assets can be described as under:

Credit card receivables are unsecured. Automobile / vehicle loan receivables are usually secured by the underlying automobile / vehicle and sometimes by a guarantor. Mortgages are secured by the underlying property. Personal loans are usually unsecured. Corporate loans could be unsecured or secured by a charge

on fixed assets / receivables of the company or a letter of comfort from the parent company or a guarantee from a bank / financial institution. As a rule of thumb, underlying assets which are secured by a physical asset / guarantor are perceived to be less risky than those which are unsecured. By virtue of this, the risk and therefore the yield in descending order of magnitude would be credit card receivables, personal loans, vehicle / automobile loans, mortgages and corporate loans assuming the same rating.

Risks associated with Securities Lending

Securities Lending: The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme(s) and the approved intermediary.

Risk associated with legal, tax and regulatory risk factors

The schemes of the Fund could be exposed to changes in legal, tax and regulatory regime which may adversely affect it and / or the investors. Such changes could also have retrospective effect and could lead to additional taxation imposed on the schemes which was not contemplated either when investments were made, valued or disposed off.

SEBI/IMD/CIR No. 4/168230/09 dated June 30, 2009, no entry load will be charged for purchase / additional purchase / switch-in accepted by the Fund with effect from August 1, 2009. Compliance under Foreign Account Tax Compliance Act (FATCA)

The Hiring Incentives to Restore Employment Act (the "Hire Act") was signed into US law in March 2010. It includes provisions generally known as FATCA. The intention of these is that details of U.S. investors holding assets outside the US will be reported by financial institutions to the IRS, as a safeguard against U.S. tax evasion. As a result of the Hire Act, and to discourage non-U.S. financial institutions from staying outside this regime, financial institutions that do not enter and comply with the regime will be subject to a 30% penalty withholding tax with respect to certain U.S. source income (including dividends) and gross proceeds from the sale or other disposal of property that can produce U.S. source income. Sections 1471 through 1474 of the U.S. Internal Revenue Code impose a 30% withholding tax on certain payments to a foreign financial institution ("FFI") if that FFI is not compliant with FATCA. The Fund is a FFI and thus, subject to FATCA. Beginning 1 July 2014, this withholding tax applies to payments to the Fund that constitute interest, dividends and other types of income from U.S. sources (such as dividends paid by a U.S. corporation) and beginning on 1 January 2017, this withholding tax is extended to the proceeds received from the sale or disposition of assets that give rise to U.S. source dividend or interest payments. These FATCA withholding taxes may be imposed on payments to the Fund unless (i) the Fund becomes FATCA compliant pursuant to the provisions of FATCA and the relevant regulations, notices and announcements issued thereunder, or (ii) the Fund is subject to an appropriate Intergovernmental Agreement ("IGA") to improve international tax compliance and to implement FATCA. The Fund intends to comply with FATCA in good time to ensure that none of its income is subject to FATCA withholding.

India is currently in negotiations to sign an IGA with the U.S. and the Fund intends to take any measures that may be required to ensure compliance under the terms of the IGA and local implementing regulations. Investors should consult their own tax advisors regarding the FATCA requirements with respect to their own situation. In particular, investors who hold their Units through intermediaries should confirm the FATCA compliance status of those intermediaries to ensure that they do not suffer FATCA withholding tax on their investment returns.

For more details on FATCA please refer to 'Compliance under FATCA' section of Combined SID.

Compliance with Volcker Rule

The Volcker Rule is a part of the U.S. Dodd Frank Act which prohibits U.S. banks from proprietary trading and restricts investment in hedge funds and private equity by commercial banks and their affiliates. HSBC Holdings plc, is a U.S. regulated bank holding company and any entity (company, fund, trust, partnership etc.) located anywhere in the world, that is directly or indirectly controlled by the parent company is subject to the Volcker Rule. The Volcker Rule is effective from July 21, 2015.

As part of HSBC's Volcker Conformance obligations, the Fund is required to implement a Compliance Programme to ensure on-going compliance with the Volcker Rule and the AMC must ensure that no HSBC affiliate (fund or business entity) invests in the Fund unless it has implemented necessary controls to ensure that the ownership limits, in line with the Volcker Rule, can be met. Hence, the Fund may not be able to accept subscriptions from HSBC group entities into the schemes of the Fund, aggregating to more than 4.9% of the voting rights of a scheme or more than 19.9% of the assets under management of any scheme. In the event of the aggregate investment by HSBC group entities crossing the above limits, the Fund will have the discretion to reject any subscription/switch applications received or redeem any excess exposure by the group entities in the Fund, to be in compliance with the Volcker Rule.

This has been recommended by SEBI in order to avoid any instance of mis-selling, particularly in advisory based transactions. Due to this regulatory change, all employees of distributors who are involved in sale of mutual fund products are required to obtain an Employee Unique Identification Number (EUIN). Applications received without a valid EUIN and / or valid sub-broker code (should be a valid ARN and not an internal code) are subject to rejection by the fund.

9) Prevention of Money Laundering and Know Your Customer (KYC)

KYC is mandatory under the Prevention of Money Laundering Act, 2002 for all investors irrespective of the amount of investment (including Switch, transfer of units, minor to major status change & Systematic Investment Plan/Systematic Transfer Plan registered). MIRSD/SE/Cir-21/2011 dated October 05, 2011 issued guidelines for uniform KYC requirements for investors while opening accounts with any intermediary in the securities market (w.e.f January 01, 2012). In order to bring this into effect, SEBI has appointed KYC Registration Agencies (KRA's) who will act as a central authority to maintain records of KYC compliant investors in the securities market. This is in order to avoid duplication of KYC process with every intermediary. As a result, once the client has done KYC with a SEBI registered intermediary, he/she need not undergo the same process again with another intermediary.

An investor can fulfill the KYC requirements by filling up the prescribed form and submitting the same along with the other requisite details / proof (attested true copies of supporting documents relating to proof of identity and address for verification with the original) and submit along with the investment application, if not already KYC compliant. Stand alone KYC requests shall not be accepted by the AMC/RTA of AMC. Fresh KYC requests received in the old KYC form will be subject to rejection.

However, in case of applications received by the mutual funds directly from the clients (i.e. not through any distributor), the AMCs may also rely upon the IPV performed by the scheduled commercial banks.

Investors investing in the fund are requested to note that. SEBI vide circular no. MIRSD/Cir-5/2012 dated April 13, 2012 & SEBI vide circular CIRMIRSD132013 dated Dec 26, 2013 has advised the following:
